TURN CHALLENGES INTO CONCRETE SOLUTIONS

Practical technologies and strategies for a resilient, secure and decarbonised energy future towards 2030.

GENERATION
Conventional and low-carbon power generation technologies

MRO
Maintenance, repair and overhaul solutions for critical power assets

DECARBONISATION
Emission reduction pathways, fuel transition and efficiency improvement

SMART SOLUTIONS
Digitalisation, automation and innovative solutions for smarter operations

INDUSTRIAL CHALLENGES

MEGAWATT 2026 addresses the key challenges shaping the power generation industry, bringing together technology providers, utilities, operators and policy makers to turn today's challenges into real-world solutions.

RELIABILITY & FLEXIBILITY
Meeting new power demand with secure, reliable and flexible assets.

ASSET LIFETIME & PERFORMANCE
Extending asset life under flexible and cyclic operation through innovation and MRO.

DECARBONISATION
Practical pathways to lower emissions, including new fuels, CCUS and advanced technologies.

POLICY & MARKET DESIGN
Enabling investment and technology deployment through effective regulation. and market frameworks.

2,500 INDUSTRY PROFESSIONALS

PARTNERS & SPONSORS

The organisations supporting MEGAWATT 2026.

Working together to advance innovation, reliability and a more sustainable energy future.

EDISON

Edison is the oldest energy company in Europe, with over 140 years of pioneering achievements, and one of the leading energy operators in Italy.

With a workforce of nearly 6,000 people, the Group is at the forefront of the energy transition, in line with the United Nations Sustainable Development Goals (SDGs) and European decarbonisation policies.

This transformation is driven by Edison's 2030 Strategic Plan, which focuses on the development of renewable energy sources and energy storage solutions, low-carbon energy and green gases, and ensuring energy supply security through a diversified and flexible gas portfolio. The Plan also aims to support residential, industrial and public sector customers in improving energy efficiency, achieving decarbonisation and adopting sustainable mobility solutions, thereby enhancing their competitiveness.

Through educational initiatives and partnerships with schools, universities and local institutions, Edison promotes the development of skills in energy, innovation and sustainability, contributing to the growth of local communities and future generations.

ANSALDO ENERGIA

Ansaldo Energia, headquartered in Genoa, is a global leader in power generation and a key player in the energy transition.

Founded in 1853, the company designs and manufactures gas turbines, steam turbines and generators.

With a strong commitment to innovation, Ansaldo Energia is also active in the nuclear energy and green technology sectors, providing reliable, efficient and flexible energy solutions worldwide.

STRATEGIC CONFERENCE PARTNER

ENGINTEC

ENGINEERING SOLUTIONS PARTNER

Engintec is an Italian engineering company founded in 2004, leader in delivering high-level engineering services in both civil and industrial sectors.

With over 20 years of experience, we provide advanced engineering solutions worldwide with a strong focus on power generation.

Our core competencies include technical consultancy, FEM and CFD, service, design of measurement systems and special components for gas turbines, procurement, specialised training programs, service and on-site supervision.

Our team of highly qualified engineers and expert designers brings extensive technical know-how and expertise in turbomachinery, innovative technologies, BIM and 3D modelling, focusing on integrated design, fluid dynamics and structural engineering.

Our range of expertise is wide-reaching, spanning from the study and modelling of gas and hydraulic turbines to combustion systems and the aerospace industry.

We support our clients in optimising their products performance, ensuring reliability, reducing time to market and minimising manufacturing costs associated with prototyping and on-site adjustments.

ATLA SPA

Sponsor

Founded in 1978, ATLA is an Italian company with experience in Special Processes and innovative coatings mainly for manufacturing and repair activities on heavy duty, aeroderivative and jet engines gas turbine parts for the most important OEMs. Since 2010, ATLA has been a partner of Mitsubishi Heavy Industries, one of the world's leading industrial groups.

As an authorized repair shop, the company provides a fully integrated service for the exclusive refurbishment of gas turbine hot gas path parts. At its facility in Chieri (Turin), ATLA offers customers the vertical integration of various Special Processes - including coatings, heat treatments, laser drilling, EDM, welding, and non-destructive testing - supported by a carefully selected network of qualified suppliers, including its affiliate TAG, which specializes in heat treatments.

This close collaboration enables optimized process management and positions ATLA as a single point of contact for the delivery of finished products. ATLA continuously adopts and improves its Integrated Management System, in compliance with leading ISO standards.

The company is certified to AS/EN 9100 and AS/EN 9110 for aerospace requirements and holds Nadcap accreditation for critical Special Processes.

BIBUS METALS AG

Stand No. 46

BIBUS METALS AG belongs to the BIBUS organization, founded in 1979 and headquartered in Switzerland (12,000 m² facility), is a leading international distributor of titanium and titanium alloys as well as nickel and nickel-based alloys, in form of bars, sheets/plates/strip and tubes.

We operate internationally, with more than 10 service-centers in the United Kingdom, Central Europe, China, Malaysia, and South Korea, allowing us to serve customers efficiently across Europe and Asia.

We are certified according to ISO EN 9001 and EN 9120, reflecting our commitment to quality management and traceability, especially for industries with stringent requirements.

Our processing capabilities include cutting, shearing, marking, and waterjet cutting, ensuring that our customers receive materials in the exact form and quantity required for their applications.

Our mission is to be a reliable partner for specialty metals, supporting our customers success through expert advice, high-quality products, and tailored services.

Our guiding principle, “supporting your success”, encapsulates our dedication to a customer-centric approach.

BIBUS METALS

GFM SPA

Stand No. 50

GFM is a company based near Bergamo with over 40 years of experience in precision mechanics for power generation, and more recently for aerospace and defence.

It stands out for the variety of machining processes, both in size and complexity, made possible by a combination of in-house capabilities and a network of qualified partners—all while ensuring total quality control across every production phase.

Innovation is another key strength, driven by strategic investments in advanced manufacturing systems and emerging technologies such as additive manufacturing.

GFM's large warehouse of raw materials, semi-finished and finished products enables fast response times and distinguishes the company from traditional suppliers.

The company also supports OEM service departments with assembly and maintenance activities for energy generation systems.

With the acquisition of the historic ATS facility in Sasso Marconi (BO), GFM has added lost-wax casting to its portfolio, producing complex custom components in steel, aluminium and special alloys.

ICME

Sponsor

ICME is an international engineering and industrial services company specialising in the oil & gas and power generation sectors.
Operating through its branches in Libya, Canada and Europe, the company provides integrated solutions covering engineering, project management, procurement, installation, commissioning and maintenance.
With extensive expertise in gas and steam turbine overhauls, generator maintenance, electrical systems, control systems and high-voltage power transmission networks, ICME supports customers throughout the entire lifecycle of their industrial assets.
Active in the Libyan energy sector since 2016, ICME combines technical expertise, international partnerships and local capabilities to enhance equipment reliability, optimise plant performance, extend asset lifetime and minimise operational downtime.

LA RAPIDA SA

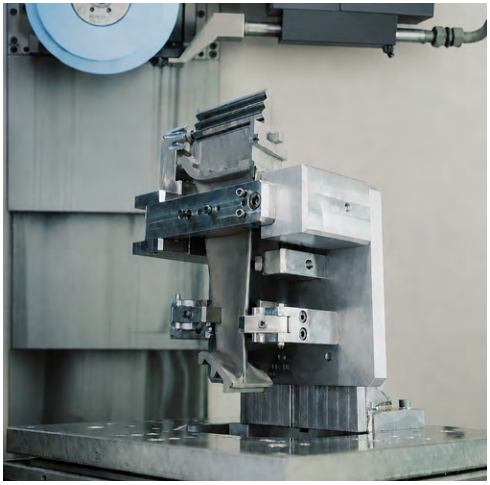

Sponsor

La Rapida SA is a Swiss precision manufacturing and process engineering company delivering complex components and advanced solutions to the global Power Generation and Aviation industries.

Our core expertise lies in stator and rotor parts, including blades, vanes, shields and shrouds. Our capabilities span CNC milling, turning, grinding, EDM, FastDrill, STEM machining and brazing, with a strong focus on challenging geometries, advanced materials and critical tolerances.

Trusted by leading global OEMs, we combine advanced technology, process engineering expertise and the flexibility to meet the most demanding quality requirements.

LA RAPIDA
INTEGRATED PRECISION MANUFACTURING

MASTER CHEMICAL SERVICE SRL

Stand No. 53

Master Chemical Service Srl is a premier provider of industrial technical cleaning services, acting as a strategic partner for clients across the energy and manufacturing sectors.

Founded in 2003, we bridge the gap between heavy-duty maintenance and precision engineering, helping clients to run complex production environments at peak efficiency with tangible costs optimization.

While standard cleaning services focus on surfaces, we focus on systems, operational uptime, employee safety and regulatory compliance. From chemical cleaning to cryogenic dry ice cleaning we use advanced technology, specialized equipment and a team of certified technicians to eliminate contaminants, restore efficiency, reduce downtime, extend lifespan of your assets.

We are specialized in cleaning for condenser, heat exchangers, HRSG, boilers and air cooled condenser. Our “zero-incident” safety culture and rapid-response protocols are designed to get your facility back online faster and safer.

We are ISO 9001, 14001 and 45001 certified and by the constant research of methods to minimize the social and environmental impact we help clients to meet their ESG (Environment, Social, Governance) goals without compromizing results.

MEDISKY LLC

Sponsor

Medisky L.L.C. is a multinational engineering company established in 2004 and headquartered in Dubai, UAE, specializing in premium aftermarket solutions for industrial gas and steam turbines.

Serving the Oil & Gas, Power Generation, and Petrochemical sectors, Medisky manufactures high-quality capital spare parts - including Hot Gas Path components, turbine blades, vanes, combustion systems, and associated hardware - through advanced reverse engineering and precision manufacturing that meet or exceed OEM standards.

The company also provides comprehensive field services, including inspections, overhauls, component refurbishment, commissioning support, and the deployment of experienced engineering specialists worldwide.

With proven expertise across Siemens, GE, Nuovo Pignone, and Rolls-Royce turbine fleets, Medisky delivers reliable, cost-effective solutions that improve plant performance, extend equipment life, and reduce maintenance costs.

Operating under internationally recognized quality management systems, including ISO 9001, and supported by a European engineering and supply-chain network, Medisky combines technical excellence, rapid response, and global logistics to provide customers with a trusted independent alternative for turbomachinery lifecycle management.

N-PROTEC AG

Stand No. 40

Founded in 2013 and based in Windisch (CH) with an additive manufacturing and combustor service center in Cottbus (DE), we deliver advanced engineering and lifecycle solutions for industrial gas turbines. Our core expertise lies in turbine component design integrity, life-limiting factor analysis, degradation mechanisms, and reliable repair technologies.

Capabilities include SLM additive manufacturing of Ni-based superalloys, post-processing (heat treatment, machining), 3D scanning and tactile measurement, flow testing, and comprehensive re-engineering using CAD/CAM and metrology.

We support turbine fleets in 2nd and 3rd life cycles with services spanning component redesign and optimization, outage management, refurbishment, modernization, and emergency supply chain management.

With a global sourcing network and partnerships in Italy, UAE, and USA, our team combines 100+ years of industry know-how. To date, 400+ projects have been delivered to OEMs, ISPs, IPPs, and utilities worldwide.

REMAZEL ENGINEERING SPA

Stand No. 52

Remazel Engineering is an Italian leader in advanced engineering and manufacturing for the energy sector.

With more than 50 years of experience and a solid customer-oriented culture, the Company has established long-term collaborations with global major players, combining technical excellence with innovation and flexibility.

Within this framework, the Combustions Business Unit stands as a center of excellence, dedicated to the design, industrialization and production of critical components for Gas Turbines.

A highly specialized team oversees the entire process—from engineering to qualification—applying Lean Manufacturing principles that ensure efficiency, quality and precision at every stage.

Our core products include burners, combustion chambers for gas turbines, and boiler burners for industrial applications. By combining technical expertise with flexibility, Remazel delivers tailored solutions that guarantee performance, reliability, and innovation, contributing to a more efficient and sustainable energy future.

REMAZEL ENGINEERING

TEMA ENERGY SRL

Stand No. 26

TEMA Energy is a Company specialized in manufacturing and testing of Burners and Combustors for Gas Turbines and in design and fabrication of Exhaust Stacks. Founded in 2013, TEMA Energy entered the TEMA Group in 2019 and since then has developed strong competences in the manufacturing and testing of highly sophisticated Burners and Combustors for several type of Gas Turbines using modern technologies and special processes such as laser welding, laser drilling, NDT and Flow Testing.

Thanks to passion and skills of its organization, TEMA Energy holds numerous international certifications such as ISO 9100, ISO 3834-2, ISO 1090-1, ISO 14001/45001 and in 2022 has achieved the Nadcap certifications for welding, NDT and laser drilling with the aim of approaching the Aviation, Aerospace and Defense sectors.

OUR EXHIBITORS

Meet the companies powering progress across the energy value chain.

Innovators, manufacturers, service providers and solution partners at MEGAWATT 2026.

Aarding Thermal Acoustics BV

Stand No. 34

Aarding, a CECO Environmental brand, is a global provider of gas turbine exhaust and flue gas systems, stacks, expansion joints, and retrofit solutions.

Together with our sister companies within CECO Environmental, we provide a broader portfolio of integrated solutions. Burgess-Manning provides industrial noise-control and silencing technologies, acoustic enclosures, louvers, sound walls, and air intake filtration and ventilation solutions. Peerless provides emissions-control technologies, including Selective Catalytic Reduction (SCR) and CO catalyst systems.

This combined portfolio enables us to support customers across the complete air and gas path from air intake and ventilation to exhaust, noise attenuation, and emissions control. With decades of engineering experience, from new-build power plants to complex retrofit projects, Aarding designs and delivers complete systems that help operators improve performance, address stringent environmental requirements, and support the energy transition. Aarding combines advanced acoustic, thermal, structural, and flow engineering with practical manufacturing and project execution capabilities.

Our global network of engineering, fabrication, and project management resources enables us to support customers worldwide.

ACWA Power Field Services

Stand No. 56

Acwa Field Services (AFS), part of Acwa, is a leading provider of specialized field and repair services for power generation assets.

Capabilities include outage management, major equipment maintenance, on-site repair and diagnostics, and rapid-response interventions for thermal and renewable facilities. AFS helps customers enhance reliability, optimize performance and maximize equipment lifecycle value.

With extensive experience in major inspections, long-term maintenance programs and emergency outage support, AFS combines technical expertise and operational flexibility to deliver safe, efficient and cost-effective solutions for energy infrastructure.

Alfred Rexroth Gmbh & Co. KG

Stand No. 14

Alfred Rexroth GmbH & Co. KG, based in Berlin, is a medium-sized metal processing company with a long tradition of precision “Made in Germany.” The company manufactures customized components, prototypes, and assemblies for industry and commerce.

With a modern machinery park, Alfred Rexroth offers diverse manufacturing techniques, including forming, machining, welding, fine finishing, and assembly — from single units to series production. Particularly in the energy technology sector, the company delivers reliable, high-precision components for demanding applications.

Sustainability, quality, and tailored solutions are central: environmentally friendly production processes, high process reliability, and an experienced team ensure precise, fit-for-purpose results. Alfred Rexroth is thus a trusted partner for technical solutions and components in the energy sector.

Allinox Components Srl

Stand No. 01

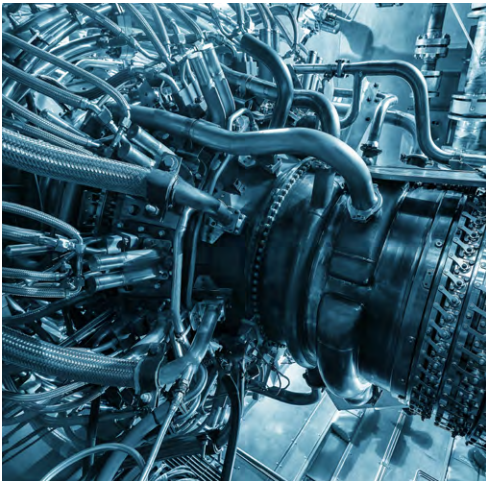

The company has many years of experience in the processing of special alloys such as Hastelloy X, Inconel 718, Inconel 625, 17-4 PH and Haynes 188. The main sectors in which we operate are Aerospace and Turbogas.

Our main strength is the ability to process sheet metal together with all related operations, including Nadcap-certified welding, laser cutting, brazing, EDM and 5-axis machining for both small and large components, including boring operations.

We also perform in-house processes such as non-destructive testing with penetrant liquids, oil flow testing and pressure testing.

Our reliability allows us to work with some of the most important OEM customers.

Axial Fans Int Srl

Stand No. 47

Patented technology. Proven performance. Axial Fans International doesn't just build fans: we re-engineer entire cooling systems. Our patented UNIQUE fan delivers unmatched efficiency, while our standard range powers new-build projects.

Need more from existing plants? We revamp complete air-cooled condensers, air coolers and cooling towers to boost airflow, slash energy consumption and extend asset life.

Backed by Global Service maintenance contracts, AFI keeps your equipment at peak performance. Stop wasting energy.

Start winning with AFI.

BBM Officine Meccaniche SpA

Stand No. 88 a

Since 1965, BBM has provided industrial OEMs with complete turnkey solutions for welded components, precision machining, and assembly of medium-to-large parts and complete machines.

Equipped with CNC boring-milling machines up to 20m and CMM inspection equipment, BBM manufactures complex structures for the steel, energy, aerospace, and naval sectors.

We combine certified welding (EN 1090 EXC4, internal IWE supervision) with workshop assembly of units up to 120 tons, including electrical, hydraulic, and pneumatic lines. Certifications: EN 1090 | ISO 9001 | ISO 14001 | ISO 45001 | ISO 27001 | ISO 50001.

BILFINGER Turbo Blading Netherlands BV

Stand No. 81 b

As an international industrial services provider, Bilfinger is committed to being the No. 1 partner for enhancing efficiency and sustainability in the process and energy industries.

The energy sector demands reliability, precision, and the ability to keep critical assets running - whatever the conditions.

Bilfinger brings decades of hands-on expertise to exactly that challenge. We support your operations across the entire powertrain.

At MegaWatt 2025, we present our specialist capabilities in two key areas of the powertrain: Turbine Blades & Components — Bilfinger delivers high-quality, precision-engineered products and services for turbines and compressors. As a leader in the aftermarket industry, we offer a comprehensive range of blades and components for all major brands, supported by advanced re-engineering capabilities. Gearbox Solutions — We offer unmatched expertise across the full lifecycle of gearboxes.

We are the original equipment manufacturer (OEM) of brands like Stork and Rademakers. From diagnostics and design to repair and upgrades, our integrated services ensure peak performance, minimized downtime, and cost-effective execution. Your operational continuity is our priority. Because at Bilfinger, Your Performance Is Our Business.

CA.S.T.IM.2000 Srl

Stand No. 02

Ca.S.T.Im. S.r.l was founded in 1972 in Vezza d'Alba (Cuneo) Italy and began by building heat exchangers, pressure tanks, refrigeration system components, and metal fabrication for the petrochemical and energy industries.

In 2000, a corporate restructuring led to the birth of Ca.S.T.Im. 2000 S.r.l which acquired all the know-how and technology. In 2002, Ca.S.T.Im.2000 S.r.l bought the technology and know-how for spring mounts from the Turin branch of Flexider S.p.A, which expanded our production range and helped us become one of the main component production companies for piping with constant and variable supports, struts, shock absorbers, sliding plates and cryogenic supports.

Today we are able to design and build components ranging from: Industrial systems on skids for Power Plants – Refineries, Atmospheric and Pressure Tanks, Shell and tube heat exchanger,Support for pipes, Heavy fabrication and support structures.Ca.S.T.Im.2000 S.r.l. policy is finalized to guarantee to its Customers the best quality products and services during all phases: Engineering and projects development, manufacturing, final assistance at site with qualified Field Engineers.

C*Blade SpA

Stand No. 21

C Blade is an Italian company with over 60 years of experience in the design, forging and machining of blades for steam turbines and compressors for gas turbines.

Since 1963, we have been developing high-precision components for applications in the Power Generation, Oil & Gas and industrial sectors, combining metallurgical expertise, advanced technology and manufacturing know-how.

Our capabilities cover the entire production process, from forging and heat treatment to 5-axis CNC machining, metallurgical testing and quality control. We manufacture blades up to 1,800 mm in length, meeting the demanding standards of leading international OEMs and MRO operators.

Since 2024, we have been part of WeBlade Group, created through the integration of C Blade and DOM. Together, we combine complementary expertise, technologies and manufacturing capabilities, creating an integrated industrial platform covering the entire value chain, from engineering and forging to precision machining and finishing.

C Blade brings to the Group the strength of a long-standing industrial heritage, combined with a constant drive for innovation, precision and reliability.

CEMB SpA

Stand No. 80

CEMB Vibration develops advanced solutions for machinery protection, vibration monitoring and condition monitoring in power generation and energy-intensive industries.

Our technologies help operators improve the safety, reliability and availability of turbines, generators, compressors, pumps and other critical rotating assets.

At MEGAWATT Bergamo, CEMB presents a complete approach combining sensors, portable instruments, online monitoring systems and diagnostic platforms. A key solution is TDSP, the modular rack-based system designed to measure, protect and communicate. It monitors absolute and relative vibration, shaft displacement, eccentricity, speed, axial position and relative expansion, while providing alarm, trip and communication functions for demanding applications.

API 670 compliance, SIL 2 and SIL 3 configurations, flexible industrial communication and integration with the ProVib platform make CEMB solutions suitable for new installations and modernization projects.

From field measurement to continuous monitoring, CEMB supports plant operators, OEMs and engineering companies in protecting critical assets and improving maintenance decisions.

Editoriale Delfino Srl

Stand No. 89 a

Editoriale Delfino has been, since 1947, a benchmark in Italian technical publishing for the electrical and energy sector.

Founded in Milan, it is now led by the Ferriani family, who over the years have strengthened its identity around the world of energy. It publishes 5 magazines, 3 supplements and 14 specialized websites and portals, including “Elettrificazione” and “Power Technology”, dedicated to power generation, transmission and distribution, smart grids and renewable energy sources.

Its catalogue includes over 500 technical titles, constantly updated, designed for designers, installers and professionals in the electrical and energy sector.

The publishing house closely follows the energy transition, with content on efficiency, storage, hydrogen and smart grids, supporting companies and professionals in the evolution of the energy system towards a more sustainable and decarbonized future.

It takes part in the main trade fairs in Italy and abroad and maintains a strong Made in Italy identity, having always relied on local suppliers for its entire publishing production.

We look forward to welcoming you at our MEGAWatt stand to discover the latest publishing releases dedicated to the world of energy.

Holland-Controls BV

Stand No. 70

Holland-Controls is your independent specialist in gas turbine control systems.

We offer optimum control system solutions for existing gas turbines, reciprocating engines and related equipment. The HC-CORE3 is the backbone of our expertise and performs in any situation or circumstance.

We combine your assets and requirements with the latest technological developments, realising the best possible solutions in both price and performance, to maximise system uptime and minimise risks.

Our systems are used for demanding applications including gas compression, crude oil pumping and power generation. We gained a wealth of experience with gas turbines built by the world's major manufacturers, including Rolls-Royce, Solar, General Electric and Siemens.

With all of this expertise readily available in-house we develop superior, bespoke control systems. We are convinced that proven engines deserve reliable controls. A gas turbine control system tends to age faster than the equipment it is controlling.

Due to our reassuring history and half a century of experience in the field of gas turbine controls we are your premium partner to do that. Our solutions lead to a more efficient, accurate and reliable application while at the same time decreasing the total cost of ownership.

IPR Macchine Srl

Stand No. 68

IPR MACCHINE rappresenta in esclusiva per l'Italia una rosa di fornitori tedeschi e svizzeri di grande prestigio, accomunati dalla garanzia di prodotti di altissima affidabilità nei rispettivi settori, con un Team di lavoro capace di rispondere con rapidità ed efficacia alle richieste dei nostri clienti.

Nelle lavorazioni meccaniche di componentistica TurboGas per il settore Energia, rappresentiamo in esclusiva i marchi MÄGERLE e BLOHM JUNG, campioni del processo di rettifica in Creep-Feed e oggi leader mondiali con i centri di lavoro MÄGERLE MFP per la rettifica, fresatura e alesatura di profili di pale turbine (Ugelli e Pale Rotanti) e le rettificatrici piani e profili BLOHM JUNG ad alta precisione e produttività.

Insieme ai nostri fornitori qualificati, siamo in grado di garantire ai nostri clienti il sistema di produzione "chiavi in mano":

- Impianto MÄGERLE / BLOHM JUNG
- Mole abrasive e rulli diamantati con il nostro marchio di proprietà IPR-PG Precision Grinding ®
- Lubro-refrigerante OELHELD e sistema di filtrazione HOFFMANN

Ricordiamo infine che possiamo supportare i nostri Clienti nelle fasi di installazione, avviamento impianto, manutenzione ordinaria e straordinaria, grazie al Team di tecnici IPR SERVICE.

Jiangsu Youye Precision Machinery Co. LTD

Stand No. 74

Founded in 1985, Jiangsu Youye Precision Machinery specializes in steam turbine and gas turbine blades for the power generation industry.

With integrated capabilities in casting, heat treatment, machining and inspection, we supply high-quality turbine blade solutions to major OEMs.

Our steam turbine blade portfolio covers units up to 1000 MW, while our new equiaxed gas turbine blade production line, launched in 2026, supports light-duty gas turbines up to 50 MW.

From proven steam turbine expertise to emerging gas turbine capability, Youye is your trusted turbine blade partner.

Lombardy Energy Cleantech Cluster

Stand No. 92

The Lombardy Energy Cleantech Cluster (LE2C) is the industrial and research network for energy and the environment, recognised by the Lombardy Region as one of the 10 technological Clusters in the territory.

Based in Milan, Italy, it promotes collaboration across diverse actors, including businesses, universities and public bodies, with the ultimate aim of transitioning towards a sustainable, low-carbon bioeconomy.

By bringing together over 140 members, it enables the creation of strategic supply chains to tackle large scale energy projects thus accelerating bottom-up sustainability programmes.

LE2C actively drives Europe's transition by fostering collaborations in areas such as smart energy systems, circular economies, sustainable manufacturing and green building.

Through its active participation in major international networks like the European Cluster Collaboration Platform and the Vanguard Initiative, as well as working for EU, National and Regional funded projects, LE2C empowers local innovators to scale their technologies and lead impactful environmental projects on a global stage.

MAPA Turbines SP. Z.o.o.

Stand No. 10

MAPA Turbines, based in Lublin, Poland, is a specialist in advanced manufacturing support and repair services for gas turbine components.

With more than 25 years of engineering expertise and a team of 90+ specialists, we support both new and service-run components throughout their lifecycle.

For new components, MAPA works with component manufacturers to transform cast parts into ready-to-install components through post-cast operations including NDT, heat treatment, brazing, welding, precision machining and advanced coatings.

Our extensive repair and refurbishment capabilities apply the same engineering expertise and special processes to restore service-run components, extend operational life and maximize asset value. From our facility in Lublin, we support Alstom, Siemens, Ansaldo and GE gas turbine platforms and partner with OEMs, component manufacturers, independent service providers and MRO companies worldwide.

Whether supporting the manufacture of a new component or giving an existing one its next service life, our commitment remains the same: quality, reliability and engineering excellence.

MEE Industries INC

Stand No. 83

Mee Industries has been engineering, manufacturing, and installing gas turbine inlet air fogging systems for over 30 years.
MeeFog systems are high-pressure water atomizers that produce a fog of very small droplets which quickly evaporate to cool the air.
MeeFog systems are used for evaporative cooling of gas turbine inlet air, with fog nozzles installed upstream or downstream of the inlet air filters. MeeFog is also used for wet compression, where fog is injected directly into the compressor.
The fog droplets evaporate inside the compressor to provide an intercooling effect, allowing more power to be available at the output shaft. Over 1200 installations worldwide.

Metal Expert SP. Z.o.o

Stand No. 07

METAL EXPERT Sp. z o.o. is a Polish engineering and manufacturing company with nearly 20 years of experience serving the industrial and energy sectors.

The company specializes in precision machining, welding and the production of high-quality components and assemblies for demanding applications. Operating from a modern facility with more than 17,000 m² of production space, METAL EXPERT provides machining, welding, hardfacing, heat treatment, galvanic treatment, nitriding, laser and water cutting, non-destructive testing and functional testing.

Its portfolio includes valve internals, diaphragms, bolting, actuator components, precision mechanical parts and welded structures. Advanced equipment and skilled personnel enable the company to meet strict quality and reliability requirements. METAL EXPERT has delivered projects for customers in power generation, heavy industry and infrastructure sectors across Europe, North America, the Middle East and Asia.

The company continuously invests in modern technologies, engineering development and sustainable solutions, including waste valorization and agricultural micro biogas projects. Its flexibility, technical expertise and customer-focused approach make METAL EXPERT a reliable partner for complex industrial projects.

Metalvar New Srl

Stand No. 60

Metalvar New Srl: over 30 years of innovation in metal surface treatment. Metalvar New was founded in the early 1990s with the goal of advancing thermal spray coating technologies both in Italy and on the international stage.

The company specializes in innovative ceramic and metallic coatings, designed to enhance surface performance in demanding industrial applications.

These coatings serve as a high–performance alternative to more traditional solutions such as weld overlays and hard chrome plating, offering benefits like improved wear resistance, corrosion protection, and longer component lifespan.

By focusing on advanced materials and processes, Metalvar New has positioned itself as a key player in delivering efficient and modern surface engineering solutions across multiple industries.

Innovation, quality, and an international vision have always been the core values driving the company's growth.

MW Coatings Hub

Stand No. 81 A

MW Coatings Hub repairs and coats gas turbine and aerospace components, helping operators return worn parts to service instead of replacing them.

At our facility in Kalisz, Poland, we run the full repair route under one roof and one quality system: stripping and cleaning, inspection, atmospheric plasma spray, shot peening to aerospace standards, recoating with diffusion and aluminium slurry coatings, and final evaluation.

Our portfolio also covers fluoropolymer (PTFE, PFA, FEP) and dry film lubricant coatings for wear, corrosion and anti-galling protection. We are certified to AS9100D, ISO 9001:2015 and Nadcap Chemical Processing, and our coating and repair processes hold OEM approvals for gas turbine hardware.

First article, process qualification and documented release are run together with each customer.

In 2027 we add HVOF thermal spray to our capabilities. We serve power generation, aerospace, space and oil & gas, with offices in Warsaw and Zürich. Tell us your specification – we'll tell you whether we already work to it, or what qualification would take.

Bring us a part.

RTD Group Srl

Stand No. 45

Three solid realities for one strong Group.

Rtd Group represents the union of three solid companies specialized in the production and distribution of forged and rolled rings, flanges, discs, blocks and bars.

Through an overall vision, the Group is able to offer customers a wide range of products and services, thanks to effective and tailor-made solutions, aligned with the highest and most demanding market expectations.

SAJ, Societé D'Acoustique Industrielle

Stand No. 85

SAI is an engineering company specializing in turnkey air filtration, ventilation and acoustic treatment systems for the energy and industrial sectors.

With over 50 years of experience, SAI combines expertise in acoustics, fluid dynamics, thermal and mechanical engineering to develop tailor-made solutions.

We target new-build, revamping, retrofit and upgrade projects involving gas turbines, compressors and gensets, with needs in air intake filtration, ventilation, exhaust systems, pressure-drop optimization and noise reduction.

Satarco Entech TradingLLC

Stand No. 62

Satarco LLC is a prominent trading and engineering company specializing in power generation, with a rich history spanning several decades.

The company was originally founded approximately 45 years ago as a support service for the maintenance of mechanical devices. Today, Satarco is a large-scale enterprise primarily engaged in power generation, engineering, and marketing systems for energy-related equipment.

We serve a diverse clientele, including private businesses, municipal organizations, and government utilities. Our team comprises highly qualified professionals in both sales and service, enabling us to efficiently manage the distribution and sale of spare parts, as well as provide comprehensive after-market services.

We possess the technical, commercial, and financial capabilities necessary to support our operations effectively. Our extensive network of offices in the UAE, China, and Turkey further enhances our service delivery.

In 2019, we established SATATURK ENERGY INDUSTRY AND TRADE LLC as a local sister company to Satarco, aimed at providing our services to the Turkish and global market.

SIKURO (Safety Job Srl)

Stand No. 29 b

Sikuro Group is Italy's reference point for workplace health and safety: a single partner combining technical consulting, technology, and training.

At its core is the proprietary Sikuro platform, made up of a web portal and app, which centralizes documents, deadlines, training, and access control in one system, cutting time spent on paperwork by up to 80%.

Alongside the software, our HSE Consulting supports production sites, general contractors, and companies in the field, while our Training division delivers the mandatory courses as required by regulations.

It is not a collection of tools, but an ecosystem where office staff and field workers share the same information in real time.

Our goal is to turn safety from a bureaucratic obligation into real value, with the ambition of "zero injuries, zero problems."

Skyline Turbine Services BV

Stand No. 03

Skyline Turbine Services B.V. is a Netherlands-based, ISO 9001-certified company specialising in independent support for Siemens Lincoln-built gas turbines, including the SGT100, SGT200, SGT300 and SGT400 models.

STS provides solutions for gas turbine packages, including the supply of new, refurbished and non-OEM spare parts, hot section components, consumables and auxiliary equipment. Its expertise also covers turbine maintenance, repairs, overhauls and the refurbishment and supply of complete gas turbine packages.

Combining technical expertise with flexible sourcing and cost-effective alternatives to OEM supply, STS helps operators maintain reliability, extend equipment service life and optimise maintenance costs.

Special Parts Ltd

Stand No. 18

Special Parts Ltd is a UK-based engineering and procurement company specialised in the energy and power generation industries, with a strong focus on industrial and aero-derivative gas turbines.

With extensive aftermarket experience, we provide solutions in engineering development, reverse engineering, manufacturing, and sourcing of quality components and spare parts. Our expertise includes hot gas path components, compressor blades, combustion chambers, ancillary parts, and specialised tooling for maintenance and overhaul operations.

Through a reliable and flexible supply chain, Special Parts supports customers worldwide with manufacturing, repair, coating, and procurement services. Our team manages databases for frame and aero-derivative turbines, ensuring fast response and cost-effective solutions.

From single components to complete sets and power plant equipment, we act as a trusted partner connecting engineering, manufacturing, and supply chain management for utilities, power producers, and service companies across Europe, the Middle East, and Asia.

Stopnoise Engineering Srl

Stand No. 78

Stopnoise Engineering is a leading supplier of soundproofing solutions for industry and its core business is constituted by silencers and soundproof enclosures.
The whole Stopnoise team has many years of experience in the design and management of solutions and products in the industrial soundproofing field.
Its strong technical know-how allows us to face and solve any soundproofing problem and meet all the related engineering, documentation and certification requirements.
Stopnoise Engineers, after becoming aware of customers' needs, carry out the acoustic, fluid-dynamic and mechanical design calculations based on software, according to technical standards and law prescriptions.
All solutions are customized according to customers' requirements and constraints.
All products are manufactured by selected partner shops and tested according to dedicated inspection plans by qualified personnel.
Stopnoise design and manufacturing is 100% in Italy, product final destinations are all over the world.
The continuous development of innovative and alternative solutions aimed at delivering the optimum combination of performance and price allows Stopnoise to keep its competitive position in the market. Short delivery time for analysis, design and product realization are among the company's main milestones.
Over the years, the passion for this work combined with a high professionalism has enabled Stopnoise to establish consolidated, trust-based relationships with its interlocutors.

TCM Tomography Center Milano Srl

Stand No. 53 c

TCM is a center of excellence for non-destructive testing (NDT) which provides high-resolution 3D internal scanning, precise metrology, and failure analysis for mission-critical industrial components.

COMPETITIVE ADVANTAGE
•European First center operating a 9 MeV linear accelerator CT system.
•Massive Capability: Scans dense components up to 1,000 kg and 2 m^3 volume.
•Extreme Penetration: Outperforms standard 450kV X-ray tubes by 20 times.
•Ultra-Fine Resolution: Achieves detail detectability to 0.2 µm for microelectronics.
•High-Accuracy Metrology: Precision scanning on stable granite-based 11-axis systems.

CORE MACHINE FLEET
•Phoenix Power|scan HE: 9 MeV source for heavy aerospace composites, satellites, and nuclear metals.
•Phoenix Microme|x & Nanome|x: Automated 2D/3D inspection tailored for electronics, semiconductors, and PCBs.
•Phoenix V|tome|x C450: 450 kV precision scanner optimized for combined NDT and 3D automotive metrology.
•Phoenix V|tome|x M Neo: Double tube micro/nano focus system for laboratory R&D and multi-material microstructures.

TARGET INDUSTRIES. TCM serves highly regulated sectors: Aerospace and Defense • Nuclear and Power Generation • Oil & Gas • E-Mobility (batteries and electric motors) • Additive Manufacturing and Advanced Materials.

Talleres Mecanicos Comas Slu

Stand No. 02 a

TMCOMAS began its industrial activity in 1954, as a family business dedicated to the execution of special and maintenance works within the precision mechanic's sector. Currently, thanks to our philosophy of continuous innovation, we are a company technologically prepared to solve any need that the industry presents in the turbomachinery's sector such as steam turbines, centrifugal, axial and reciprocal compressor, pumps and gear box.

Our motto R4: Repair, Rebuild, Restore, Reconfigure is made possible thanks to our technologies, including Laser Cladding, Tecnoplasma, Tecnofric and Tecnobraze, our R&D Department which is always on the lookout for new projects and technical solutions and our Technical Office, a team of highly qualified professionals in reverse engineering. Our latest services are our vertical storage system for critical turbine and compressor rotors created in 2022 which enables us to close the loop of rotors repair, and our new society in France, COMASTM created in 2023, specialising in Field Service Activities to be closer to our customers.

Our 75 years of experience in the mechanical and surface engineering sector have led us to become a benchmark both in Spain and internationally.
